

TIPS FOR MAINTAINING CLAY TENNIS COURTS

The performance, longevity and safety of a clay tennis court is primarily determined by the amount of maintenance it receives. We recommend the following maintenance program to keep courts at peak performance levels.

RECOMMENDED MAINTENANCE TOOLS AND TECHNIQUES

Double Handled Broom

Aussie Clean Sweep

Court Rolling

WEEKLY COURT OWNER MAINTENANCE

- Keep vegetation such as leaves and mower clippings off the surface by regularly raking or brooming the court. An Aussie Clean Sweep may be a preferred option for this task. Never a blower as it will blow all of the good clay away.
- Keep water run-off from garden beds and watering systems off the court.
- Give the court a light watering prior to using it, particularly in the heavy wear areas around the base lines.
- Broom the court before and after use, preferably with a 72" double handled, stiff bristled tennis court broom. Always broom into the base line areas.
- Should the plastic lines be standing proud, add a little loam around the base lines then broom it.
- After rain... as soon as you can walk on the court without leaving divots, broom the court to lift up the coarser grains and allow them to 'crisp up', then roll the court with a tennis court roller.

PROFESSIONAL SERVICES

- For the best results Sports Clean recommend One Professional Service per year.

ABOUT US

Sports Clean, established in 1999, was born out of the need to provide a maintenance solution to the explosion of synthetic grass sporting surfaces in Australia. Over time, Sports Clean has continued to improve on the processes and machinery that maximise the life span of a synthetic grass, or any other sporting surface.
